

DOES YOUR MOBILE CHECKOUT SITE TICK THESE SEVEN BOXES?

FIND OUT NOW

1

SHOW ALL COSTS UPFRONT

This includes shipping and transaction fees. Don't leave this to the last step, as customers don't like nasty surprises and are more likely to abandon their carts if this information is sprung on them towards the end of the journey.

2

OFFER A GUEST CHECKOUT EXPERIENCE

Forcing account creation can have a negative impact on conversions. At the same time, the option to create an account allows for a more seamless checkout process the next time they shop with you.

3

REDUCE THE AMOUNT OF FIELDS OR FORMS A CUSTOMER IS REQUIRED TO ENTER

Make this the bare minimum. If you can get away with asking for just an email or mobile number, then do it.

4

ENSURE KEYBOARDS ARE FIELD SENSITIVE

Where credit card numbers need to be entered, present the numeric keypad. Don't force customers to toggle between keypads. Where an email address is required, present a keyboard optimised to enter emails, where the @ sign is displayed along with the .com button.

5

HAVE A FAST PAGE LOAD TIME

For every second delay, you lower conversion by seven per cent¹. Forty per cent of customers will abandon a site if a page takes three or more seconds to load².

6

HANDLE ERRORS SMOOTHLY

If a customer encounters an error, where does the screen readjust to? It should pop back up to the field with error, and it should be clearly marked in red. A lot of business sites will say there is an error at the top of the screen, forcing customers to scroll down to find it.

7

HAVE UNIQUE, MOBILE-ONLY CONTENT

Think about the context that mobile is being used, and design around the context rather than repurposing content from your desktop experience onto a mobile screen. Consider where customers are accessing your mobile site from and their goals in doing so.
