

# Braintree Connector Release Notes

---

The Braintree connector allows you to perform Braintree server operations using Anypoint Platform.

Braintree is a full-stack payments platform that makes it easy to accept payments in your app or website. Braintree service replaces the traditional model of sourcing a payment gateway and merchant account from different providers. From single-touch payments to mobile SDKs and foreign currency acceptance, Braintree provide everything you need to start accepting payments today.

Read through the Braintree Connector user guide to understand how to set up and configure a basic flow using the connector. Review the connector operations and see how they work by reviewing the Technical Reference alongside the Demo Applications.
